ADS PRODUCING METHOD

Patent Assignee: YAO JIANPING (CN)
Author (Inventor): JIANPING YAO (CN)
Number of Patents: 000
Patent Family:
CC Number Kind Date
CN 1147665 A 19970416 (Basic)

Application Data:

CC Number Kind Date
*CN 95111791 A 19951006

Abstract: The said ads producing method for publication and other printed matter is that the ads, including mark, colour block, writing and pattern, are printed over the literal data in the color different from that of the literal data and the printed page. This can expand the ads space.

ABSTRACT

PROBLEM TO BE SOLVED: To sufficiently convey services, **advertisements** and the like of a financial institution to customers.

SOLUTION: Informations 14 and 15 (service guides, **advertisements**, etc.) to be conveyed to customers are printed outside transaction detail columns 13 forming **printed pages** for the financial transactions with the customers in a bankbook 10 preliminarily or at the time of printing the transaction details. Also informations 16 to be conveyed to the customers are printed preliminarily in the color different from the printing color of the transaction details by using patterns formed of words, figures and the like in the transaction detail column 13.

JAPIO CLASS: 29.4 (PRECISION INSTRUMENTS -- Business Machines)
JAPIO KEYWORD: R087 (PRECISION MACHINES -- Automatic Banking)
JOURNAL: Section: M, Section No. 1035, Vol. 14, No. 473, Pg. 90, October 16, 1990 (19901016)

ABSTRACT

PURPOSE: To obtain a booking device equipped with a function for detection of a booked page capable of detecting correctly a page on which all lines are printed by a method wherein when a printing data is printed, a mark detection means in which a page to have been printed is detected by detecting a mark for detection of the **printed page**, is established.

CONSTITUTION: A mark printing part 2a of a memory 2 is composed of a printing head 11, a printing head control part 12, a mark printing program controlling them, and a control part 1 executing the mark printing program. In the same way a mark detection part 2b is composed of an optical AD conversion part 9, a slice level control part 10, a mark detection program controlling them, and the control part 1 executing the mark detection program. Then, since a mark M for detection of a **printed page** printed outside a data column or outside a remainder column of a bankbook 4 with the mark printing part 2a is a broad wide black mark, a signal outputted with an optical sensor 8 for reading it, of which falling in of a white part becomes larger by comparing with that of its white part, is stabilized. Therefore, though printing density becomes slightly thin, the control part 1 can certainly detect the **printed page** detecting mark M.

Abstract (Basic): DE 10007025 A1

NOVELTY - The printer has a restricted print area available to the user and the remaining area of the **printed page** is defined for remote access to enable remotely controlled printing of advertising, football results, messages, weather information and comparable information.

USE - For computer-controlled printing over and on-line system.
ADVANTAGE - The user of the printer can be provided with cost-free use.

AU 9731102 A B44D-005/00 Based on patent WO 9736757

Abstract (Basic): WO 9736757 A

The article consists of a number of linked components, e.g. **printed pages**, which can be used to carry or include advertising material with illustrations and text printed on self-adhesive paper (9,12,13,14) which can be transferred from one page to another.

The adhesive material used for the illustrations and text can incorporate perfumed additives or materials which give a characteristic sound when lifted from a surface to which they are stuck. Pages containing self-adhesive detachable portions could be incorporated, for example, in a magazine.

ADVANTAGE - Enables reader or potential customer to remove and keep interesting portions of an **advertisement** for future reference.

lotto numbers on product or its packaging to assist sales promotion

Patent Assignee: AMPLIKART SPRL (AMPL-N); TEMPY SPRL (TEMP-N)

Number of Countries: 001 Number of Patents: 001

Patent Family:

Patent No	Kind	Date	Applicat No	Kind	Date	Week
BE 882701	A	19800731				198048 B

Priority Applications (No Type Date): BE 882701 A 19800409

Abstract (Basic): BE 882701 A

The numbers for a game of Lotto are included in or on a product such as sweets and their packaging as a means of promoting the product. The numbers may be hidden to appear after a layer has been removed. The numbers for a game of Lotto may be impressed on a product or covered by a layer which uncovers the number when the product is partially dissolved. Similarly the number may be printed on the packaging or incorporated within the packaging.

Where a large number of individual products such as sweets are included the numbers for the game may be limited to a small number. The remainder would not carry a number. A **printed page** is included for the game.

English Abstract

A functionally-integrated consumer product marketing, merchandising and education/information system and method which enables manufacturers, retailers, their respective agents, and consumers to carry out four basic product-related functions along the demand-side of the retail chain, namely: enabling manufacturers' marketing, brand and/or product managers to create and manage a composite brand image for each consumer product being offered for sale in both physical and electronic marketplaces; enabling manufacturers, retailers, and their advertising and marketing agents to display consumer product **advertisements** to consumers, at or near the point of purchase or sale within both physical and electronic retail shopping environments, in a way which is guaranteed to project the manufacturers' intended brand image while positively influencing product demand; enabling retailers, manufacturers, and their marketing and promotional agents to promote consumer products with consumers within physical and electronic retail shopping environments in order to positively influence (i.e. reduce) the supply of such products in inventory and promote sales and profits; and enabling consumers to request and obtain reliable information about a manufacturer's product in order to make informed/educated purchases along the demand side of the retail chain, while enabling retailer purchasing agents to request and obtain reliable information about a manufacturer's product in order to make informed/educated purchases along the supply side, thereby influencing product demand in a positive manner.

English Abstract

The present invention provides a system for providing printed information to a user that is obtained from a data base of a first party, the system including: a user printer module for interfacing the user with the data base, the module being responsive to the user requesting first information from the data base for obtaining the first information and generating a first printed media that displays to the user the first information together with second information; identifier means for applying an identifier to the first printed media such that designation of the second information by the user corresponds to a designation of the identifier and results in the generation of a second printed media that displays to the user third information; and account means for applying a financial debit from the first party against a second party from whom the third information is derived.

English Abstract

A preferred embodiment of the invention is specifically configured to allow a printer's or a user's account to accumulate a credit balance and for all or a portion of this balance to be presented to the corresponding user or users as a collection of "points". If the printer account has a credit balance, then the corresponding points may be redeemed by the user or users for particular products or services. Users thereby learn to associate fee-earning activities in relation to the printer, such as the printing of advertising and online purchasing, with the accumulation of points, thus maximising the likelihood that a particular printer will not become a cost burden to its provider.

English Abstract

A preferred embodiment of the invention relates to a network of interactive printers and the provision of persistent storage of system information. More particularly, the provision of that storage is decoupled from fee-earning activities in the network. That is, it allows a profitable role for a participant who is purely a provider of persistent storage. The printers can access information contained on a system database that is owned and/or operated by a storage provider. The system database includes data indicative of each page that is available to be printed by an interactive printer. That is, the system includes a number of actual physical pages that are printed, each of which correspond to a virtual page represented by the respective page descriptions. While each **printed page** should have a page description, there may exist page descriptions that do not have actual physical counterparts.

English Abstract

A preferred embodiment of the invention is concerned with a user of the netpage system and an interactive printer module that is utilised by the user to access the system. Each printer module has an account that contains data indicative of the usage of the printer. Moreover, each account is debited with amortized capital costs and running costs of the

respective printer, and credited with fees earned via the printer, such as fees related to advertising, click-throughs and sales. Any credit balance at the end of a predetermined period can be redeemed.

English Abstract

An on-demand computer based system is provided for allowing a user to obtain interactive printed information from a remote source such as an on-line publication. The system includes a printer module that is provided to the user for interfacing the user with the publication. The module is responsive to the user requesting the publication for generating a first **printed page** that displays to the user the publication, where that includes first information provided by the publisher and advertising that is derived from an advertiser. The module includes an identifier means for applying an identifier to the first page such that designation of the identifier by the user results in the module generating a second **printed page** that displays to the user further advertising. In some embodiments, use is made of an account server that is responsive to the module for determining a payment to be made by the advertiser to the publisher.

English Abstract

An on-demand computer based system is provided for allowing a user to obtain interactive printed information from a remote source. The system includes a printer module that is provided by a first party to the user for interfacing the user with the source. The module is responsive to the user requesting first information from the source for generating a first **printed page** that displays to the user the first information together with advertising that is derived from an advertiser. The module includes an identifier means for applying an identifier to the first page such that designation of the identifier by the user results in the module generating a second **printed page** that displays to the user further advertising. In some embodiments, use is made of an account server that is responsive to the module for determining a payment to be made by the advertiser to the first party. In other embodiments, the account server determines a payment made by the advertiser to another party and then a second payment from that other party to the first party.

English Abstract

Physical or electronic objects are encoded with identifiers, which serve to trigger object-appropriate responses from computer systems that encounter such objects. The encoding may be steganographic (e.g., by digital watermarks), so the presence of such identifiers is not evident to persons encountering the objects. An exemplary application is a computer system that looks at a printed magazine **advertisement** (20) and initiates a link to a corresponding internet page. In one such implementation, the computer system senses an identifier encoded in the **advertisement**, forwards the identifier to a remote database, receives from the database (17) a corresponding internet address (18a, 18b, 18c), and directs a browser to that address (18a, 18b, 18c). The same arrangement can be used for on-line ordering from printed merchandise catalogs. Another application is a computer system that looks at a printed spreadsheet (20), and retrieves from disk storage an electronic version of the same document for editing.

English Abstract

The present invention relates to a universal advertising and **payment system** for networking, monitoring and controlling electronic commerce and vending equipment. The system can effectuate electronic commerce and interactive advertising at the point of sale. Vending equipment includes copiers, phones, facsimile machines, printers, data-ports, laptop print stations, notebook computers, palmtop computers (PALM PILOT), microfiche devices, projectors, scanners, cameras, modems, communication access, personal computers (PC), PC terminals (NET PC), and network computers

(NC). Vending equipment can be networked to each other through a first network, programmable and accessible by a PC, server, point of sale (POS) system, property or management information system (PMS/MIS), and networked to a second network. The first network and second network can be the same network. Complete control of a vending machine's functionality including usage, control, diagnostics, inventory, and marketing data capture can be effectuated locally or by remote connection to the network. Remote connection to the network includes Internet type connections, telecommunication (telephone, ISDN, ADSL), VSAT satellite, and other wire and wireless transmission. The present invention allows a user to obtain authorization for use, pay for products and services, and configure the vending equipment with a smart card, or magnetic card (card). Magnetic cards include smart card, credit card, debit card, pre-paid, automated teller machine (ATM) or other bank or private issued card. Users can also use a hotel room key/card or other insertion type-identifying device. Additionally, biometric identification such as hand writing, voice, finger, hand, or eye (iris scan) can be utilized to control the system.

English Abstract

The present invention relates to a processing method for nullifying transaction processing fees incurred by a merchant, for processing a wide variety of credit card, e-commerce, and e-business type transactions. In addition the present invention relates to a universal advertising and **payment system** and method for networking, monitoring and effectuating e-mail, e-commerce, and e-business and controlling vending equipment and applications. The system can effectuate electronic commerce and interactive advertising at the point of sale. Vending equipment includes copiers, phones (public, private, cellular), facsimile machines, printers, data-ports, laptop print stations, notebook computers, palmtop computers (PALM PILOT), microfiche devices, projectors, scanners, cameras, modems, communication access, personal data assistants (PDA's), pagers, and other vending machines, personal computers (PC), PC terminals (NET PC), and network computers (NC). Vending equipment can be networked to each other through a first network, programmable and accessible by a

PC, server, point of sale (POS) system, property or management information system (PMS/MIS), and networked to a second network. The first network and second network can be the same network. Complete control of a vending machine's functionality including usage, control, diagnostics, inventory, and marketing data capture can be effectuated locally or by remote connection to the network. English Abstract

The present invention relates to a processing method for conducting e-mail, e-commerce, and e-business by way of an electronic commerce terminal. An electronic commerce terminal can be referred to as a pervasive computing device. In addition, the present invention relates to a universal advertising and **payment system** and method for networking, monitoring and effectuating e-mail, e-commerce, and e-business and controlling vending equipment and applications. The system can effectuate electronic commerce and interactive advertising at the point of sale. Vending equipment includes copiers, phones (public, private, cellular), facsimile machines, printers, data-ports, laptop print stations, notebook computers, palmtop computers (PALM PILOT), microfiche devices, projectors, scanners, cameras, modems, communication access, personal data assistants (PDA's), pagers, and other vending machines, personal computers (PC), PC terminals (NET PC), and network computers (NC). Vending equipment can be networked to each other through a first network, programmable and accessible by a PC, server, point of sale (POS) system, property or management information system (PMS/MIS), and networked to a second network. The first network and second network can be the same network. Complete control of a vending machine's functionality including usage, control, diagnostics, inventory, and marketing data capture can be effectuated locally or by remote connection to the network. Remote connection to the network includes Internet type connections, telecommunication (telephone, ISDN, ADSL), VSAT satellite, and other wire and wireless transmission.

English Abstract

A system, method, and article of manufacture are provided that afford a combination of commerce-related web application services. Various features are included such as allowing purchase of products and services via a displayed catalog. As an option, such catalog may be personalized. In various embodiments, a virtual shopping cart environment may be provided. Further, data, i.e. specifications, details, etc., relating to the products and services may be displayed along with a comparison between different products and services. Data relating to needs of a user may also be received for the purpose of outputting a recommendation of the products and services based on the inputted needs. Optionally, features of the products and services may be listed in order to allow the user to configure a specifically tailored product or service. Yet another aspect of the present invention includes outputting an estimate relating to a price and/or availability of the products and services. Further, an order for the products and services may be received after which a tax and a shipping fee are calculated. A status of the delivery of the ordered products and services may also be provided.

English Abstract

A system, method, and article of manufacture are provided for
prioritizing components of an existing network framework. First, a
priority is determined among a plurality of components required for
implementation of a predetermined technology using an existing network
framework. The existing network framework and the plurality of components
are then pictorially represented. Next, a first component of the existing
network framework is indicia coded in order to indicate that the first
component must be implemented first. Thereafter, a second component and
any remaining components of the existing network framework are indicia
encoded in order to indicate that the second components and any remaining
components must be implemented after the first component.

English Abstract

A data management system is provided in which a publishable story is comprised of one or more content items and one or more insertions. For publication, each insertion includes data fields which, among other things, direct at least one content item to a specified output destination. The output destination may include print, broadcast, Internet or other medium, and may be further broken down by publication, publication zone, publication date and/or publication edition. The insertions and content of a particular story are logically associated on the database, to permit users to track or edit the story, insertions or content while viewing and/or editing any or all associated insertions and content of a story. In one embodiment, content may be linked across insertions so that any change in the content will be updated to all linked versions. In another embodiment, common pages are defined in which insertions and content are to appear identically on a page across multiple media, editions or zones, in which case, insertions subject to common page rules are linked.

English Abstract

A tag encoder for producing tags to be incorporated into a printed page is disclosed. The tag encoder has an input to receive a tag structure template, an input to receive fixed data bits, an input to receive variable data bit records and a tag generator outputting single bits depending on the position in the tag defined by the tag structure template and the fixed and variable data bits. The encoder has a redundancy encoder which utilises Reed-Solomon encoding. The tag encoder is present in a printer. In addition to the tag encoder, the printer has a contone image decoder to decode compressed continuous tone image planes and a bi-level decoder to decode any compressed bi-level image plane in the compressed data. These decoded image planes are combined with the output of the tag encoder in a halftoner/compositor to produce a printed page carrying tagged areas. The tags are printed in ink which is invisible to the human eye. Such inks, could be IR or UV absorptive.

English Abstract

A system and/or process for providing content delivery via a computer network. The system includes at least one media operating unit (300) communicating with a Web server (210), which is communicating with the computer network. Each media operating unit (300) includes a press interface proxy server communicatable with one or more advertisement sources so as to receive at least one input image. The press interface proxy server parses at least a text field from each input image. An image conversion server receives from the press interface proxy server the one or more input images and at least the parsed text field, and generates output images from each input image. Each of the output images includes a respective resolution of the input image. The image conversion server transmits the output images and at least one computer network address associated with the media operating unit to the Web server.

English Abstract

A method for providing a copy of a page from a printed document, the document including coded data indicative of an identity of the document and of a plurality of reference points on the document, the method including: receiving, in a computer system, indicating data from a sensing device operated by a user, the indicating data regarding the identity of the document and a position of the sensing device relative to the document, the sensing device, when placed in an operative position relative to the document, sensing the indicating data using at least some of the coded data; and identifying, in the computer system and from the indicating data, a request for a copy of the page of the document.

Boston Globe Bans Tobacco Ads

Boston Globe introduced a ban on tobacco product **ads** on 11 November 1999, with the move taking effect at once on newspaper pages and from the start of January 2000 for pre-**printed pages**. The US-based newspaper, which is owned by the New York Times, is one of only a small number in the industry that refuses to publish tobacco **ads**. Tobacco **advertisements** make up less than 1% of overall **ad** revenues at Boston Globe.

Quad/ Graphics Expands Business With New Ad Management Service.

... Computer-to-Plate Production While Offering Ad Agencies the Advantage of Expedited File Processing

Quad/ **Graphics** has launched a new service that quickly and easily converts **digital** advertising files (or even film) to a universally accepted format for **digitally** imaging plates. The Internet-based service is a boon to advertising agencies and engravers that...

...with their clients to produce timely, effective advertising content.
The service is provided by Quad/ **Graphics** ' Advertising Resource

Management (ARM) Center, which has a dedicated call center for handling file conversions...

...for computer-to-plate production," said Tom Frankowski, vice president of Imaging Operations for Quad/ **Graphics** . "Yet, there's a lack of facilities capable of providing raster-based file-conversion services...

...requested file type(s).

-- Sends content proofs for inspection and approval. Available proof options

include **Digital** Reader, IRIS, Spectrum and top sheets.

-- Distributes final files and proof materials to a requested...

...need only call the center's toll-free hotline and provide some basic processing and **billing** information before uploading their files to a secure Internet site. From there, the ARM Center's **print ad** specialists handle the rest - from preparing files to creating proofs and distributing final files.

Soon...

...listed on ARMCenter.com, with more regularly signing on. Publishers need not print with Quad/ **Graphics** to list their ad specs on ARMCenter.com.

Raster-Based Files vs. Vector-Based Files...

...include many popular applications such as Quark, Illustrator and PageMaker - require interpretation prior to making **digital** proofs and plates, creating opportunities for errors. "In the days of film, we made the...

...Included in the vector-based file interpretation process is adding fonts and exchanging low-resolution **images** with their high-resolution counterparts, among other steps. "By nature of the way vector-based files operate, fonts, **images**, logos, etc. are separate, unique elements in the file," Mr. Frankowski said. "All too often we find fonts or **images** are missing, or text spontaneously re-flows, or page elements like boxes or shadows are...

... around the same database, a customer can make one call and deal
with both classified ads and accounts receivable. (A new Accounts
Receivable package integrated with classified and display advertising was
...

...Changes include the development of an integrated word processor, a new
screen display for the ad form, an interface to an inexpensive scanner
for handling faxed ads and software for putting ads on the Internet.
The integrated word processor enables APT to match the H&J of...

...it could be matched using a program like Word, which makes it possible
to price ads accurately while taking them over the phone. That had been a
problem with its earlier text of the ad on the screen next to the ad
form. The new look also features an attractive, easy-to-use calendar. An
enhanced pricing routine supports more ad types (including, for example,
nonprofit organizations) and enables the cross-selling of display ads and
classifieds. User-selectable rate codes and customer contracts are now
available. If a customer...

...it. Alternatively, the adtaker can use the formula to quote prices for
other combinations of ads.

APT has added support for OPI so low-resolution versions of ads can
be used on the screen and swapped for high-resolution versions on output. A
system of hot folders is available to move ads through the workflow and
to purge them. The purge routine deletes both low- and high...

...the Visioneer Paperport scanner and Caere OmniPage OCR software to
enable classified departments to receive ads by fax and convert them to
editable text for publication. The screen displays the text...

...Creating Web pages. A standard feature of the classified program is the
capability of converting ads to HTML for posting on the Web. The ad
section can be processed by classification or as an entire section. The
initial implementation is...

...plans to add enhancements to give the user control over setup
parameters, placing boxes around ads, specifying defaults for fields such
as the advertiser's city, and so on.

Ad dummyming. APT has added features to its ad dummyming program,
but the best is yet to come, we were told. New this year are features
enabling the user to control the percentage of pages that can contain ads
, the ability to flow the ad section with space reservations for ads
that haven't arrived yet, and a verify routine to inform the operator of
any ads that have been placed outside the printing area. However, next
year the program will be...

...that have more complex shaping requirements can go through Xpress. It is
possible to import ad dummies from other systems, currently including
Atex Architect and SCS Layout-8000.

Status. StatusDesk is...sec. Fast Ethernet network.

Advertising with AdVisor. Also new from ATS is AdVisor, a classified ad booking system running on a platform similar to the editorial system's. It runs with...
...from within Word.

Word templates, which are associated with specific publications, are used to handle ad styles. The pricing algorithm--again like that of some other new systems--is written in...

...structures. Similarly, generation of custom reports using Crystal Reports is easy, as is building the ad manifest to pass to ad dummyming systems.

The screen displays are effective, using folders and tabs to move to different phases of the ad booking process (like the internal setup of most Microsoft applications).

From what we saw, this...

...items remain to be added, including the handling of ROP display advertising, alternate quoting of ads, links to commercial systems and the provision of a contact-driven canvassing system.

AdSearch. ATS...Dynamic Pagination to assist in building pages automatically from the database. The input from an ad reservation system automatically places ads on pages and into the database. Xpress is used to build the layout.

Another function...

...of the database. In this way, Open Pages also can handle the management of display ads, logos and graphics.

Open Pages works with Windows 3.1, 95 and NT and with the Macintosh.

Baseview tracks pages, manages ROP ads

Baseview Products, which continues to sell its Macintosh systems at an impressive rate in spite...

...a quick status report on how various pages stand with respect to deadlines; an enhanced ad management product that handles both classified and display ads in the same database; a hot-backup capability; and an interface to the Phrasea image...package it introduced last year and replaced it with an enhanced version that supports display ads in addition to classified ads. Called AdManagerPro, it is a completely rewritten software package that uses the same database for all types of ads--classified liners, classified display ads and ROP display ads. This not only makes it possible to consolidate billing and reporting of both classified and ROP ads, but also enables adtakers to deal more efficiently with advertisers placing multiple types of ads.

AdManagerPro has Baseview's accounting system built in, but alternatively it can be interfaced to other systems.

In conjunction with AdManagerPro...

...as overrides. Within the main screen, buttons are divided into categories by function. The WYSIWYG ad window displays classified ads as they will appear on the page, with logos and graphics in place. Keyboard shortcuts serve as alternatives to most mouse operations.

To handle ROP ads, a new window appears in place of the WYSIWYG ad window used for inputting the text of classified ads. The ROP screen accommodates space reservation information such as the date, ad type, color to be used, edition, page number and so on, plus the salesperson booking the ad. The system supports pricing of classified and ROP ad packages.

Among the enhancements to the classified functionality is a new use of color with the ad-insertion calendar. It uses up to 13 colors to show factors such as when ads have been run in the past.

The file of booked ads can be fed into Managing Editor's ad-dummyming program to place the ads and send the dummy back to the editorial system for page makeup. Classified pagination is...

...will be offered for the same price as ClassManagerPro, although using the features for ROP **ads** requires additional training, which will cost \$700 per day for an unlimited number of people...subscriber names on a floppy disk and take it on a trip.

Cascade DataFlow tracks **ad** production

Besides demonstrating MediaSphere (see section on archiving), Cascade showed DataFlow, which is being used to manage the production of display **ads** and monitor the progress of **ad** production.

The DataFlow server takes booking information from a range of **ad** booking systems and stores this information in the server. DataFlow connects with Xpress via an...

...can be dragged and dropped from the server into Xpress. All the elements for an **ad** can be called out of the server or loaded into work folders. From within Xpress...

...and drop them into Xpress. The Page Builder Xtension can then automatically build pages of **ads** from stored layouts, pulling in completed **ads**. Progress can be viewed graphically using the ViewFlow monitor, which incorporates colors to represent each...

...on the network or through a WAN via the Internet. Remote users can view all **ads** with their run schedules. **Ads** can be proofed via the Internet using the Amber facility to view and print PDF files of the **ads** created by DataFlow. The software includes forms to be filled in with comments and returned...

...is possible to generate the equivalent of a tear sheet using PDF to see an **ad** in context on the page.

CCI ready with NewsDesk, AdDesk

We have been watching CCI...CCI's position in the North American newspaper market--particularly in the management of display **ads** and the control of production. CCI showed its new AdDesk system, which is being developed...

...the same Oracle database as the editorial system. AdDesk currently works with Xpress and Multi-**Ad** Creator as **ad** makeup clients on the Macintosh. Access to the CCI database is through a Macintosh X Window terminal.

Order information for the **ad** comes from the **ad** booking system. The use of the database has allowed CCI to add tracking and management of **ads** with a deadline orientation. Deadlines can be assigned to proofs and pages. As an **ad** moves through the system, the deadline position is shown and adjusted to reflect the current status. The details of the status can be sent via a messaging facility.

Ads can be logged in and out to specific teams or departments. All physical material is...

...that in Cascade's DataFlow).

CCI says that additional functionality will be possible with Multi-**Ad** next year, when a scriptable version of software becomes available. When an **ad** is opened in either Creator or Xpress, the system generates a bounding box of the correct size, plus a list of files to be used in the **ad**.

CNI on the move with Agile, Texture

Although Computer Network Integrators didn't have any...

...of the new developments is automating basic functions. For example, it automatically archives and purges **ad** elements by publication after they have expired. They then can be restored if needed to update an **ad**.

Installations. CNI reported some of its more recent installations, which have helped to give it...

...in 4 sites

It could be said that CompuText has set the standard for new **ad**

systems. To our knowledge it was the first newspaper **ad** system to use the NT server platform with Microsoft's SQL Server. It was also the first advertising system to run native under Windows 95. At Nexpo every new **ad** system seemed to follow the same approach. Today CompuText has four systems installed on this...

...engine is Word, with an excellent set of macros for creating a broad range of **ad** styles.

The screen forms used for taking **ads** are completely customizable using the Form Builder application. Multiple forms can be linked sequentially and...

...be stored in the database and retrieved on demand. Tabs are used to select different **ad** booking and selling functions. Custom columns can be added to the database. Macros can be...

...easy means of building and updating upselling quotes and prompts, the ability to have multiple **ads** open at once to allow for such functions as comparative viewing, the use of Excel...

...report generation and a direct link into Xpress to handle the makeup of booked display **ads**.

The system looks mature and is optimized for performance, especially for fast filing and retrieval of **ads**. Storing an **ad** in the database is a background process, which releases the screen rapidly for taking new **ads**.

CText switches to NT, NAPS H&J

The key announcement from CText was Dateline/NT...

...links can extend to an OPI system.

The client component of AdVision, CText's classified **ad** system for OS/2, will be ported to NT. Development will start early next year...

...features Sell, Page-News

Cybergraphic featured two of the hits of the show: the CyberSell1 **ad** booking system and the CyberPage-CyberNews editorial system. Both run in similar environments: the NT...

...make their third Nexpo appearance).

CyberSell. CyberSell is a good example of what a future **ad** system should be. It has many similarities to some other new systems, such as those...

...made it to market some time ago.)

CyberSell is based on the idea that one **ad** can be used in many places in many publications. It also can have many designs...

...is excellent. It provides access to client information through many routes, including full customer information, **ad** history, etc. **Ads** can be booked using codes, a calendar or both. An **ad** can be previewed and its cost shown, with complete information about how it was reached. In a particularly nice feature, the system supports retaining default **ads** for regular customers to speed up the booking process.

CyberSell can hold **ads** in different formats for different publications or dates, from a common booking. Sticky notes can be associated with an **ad** to serve as a marker whenever the **ad** is opened. The full note can then be viewed. The system provides excellent facilities for upselling **ads** and generating multiple price quotes. It interacts with contact managers to enable sales staff to...

...pagination system, which makes it possible to view a classification and see the number of **ads** in it and the total depth. Cybergraphic claims that storing **ads** in sorted sequence in the database enhances the pagination speed. We weren't able to...

...modified by the customer. In WYSIWYG mode the page can act as a pasteboard, allowing ads to be moved on and off pages and reflowed. Filler libraries organized by classification allow...

...positions of CompuText, PPI and, in the future, ATS in the new generation of Windows ad systems.

DT systems share data over WANs

The key theme of Digital Technology's presentation...on the Mac and it employs the same rate engine. For input and editing of ads, it uses Xpress, which avoids H&J problems when a job is output, but it...

...have Xpress--an expensive proposition for some organizations.

It supports a full calendar to schedule ads by clicking on the days they'll run, multiple publications (selected one by one or in packages), upselling of ad space (not shown at Nexpo) and Internet capabilities.

Mets enhanced. FSI has continued to add...approach for newspapers.

The system, developed over many years, provides background monitoring of processes, including ad placement, ad size checking, story placement and sizing, automatic story jumps and photo positioning. It also offers...

...data.

NewsMaker Pagination supports both Layout-8000 and Managing Editor ALS for input of the ad dummy. It allows for previewing ads in position and checking the ad status through database access. As a pagination system it also links well into other editorial...of two new products: Workflow Manager 4 and OMS, an object management system for organizing ad elements. Calling them third-generation products based on a more open architecture than its previous...

...workflow of PC and Macintosh applications. Its focus is on streamlining the production of display ads and tracking the status of tasks in the editorial department, pressroom and bindery.

It organizes...

...etc.) in folders that serve as pointers to the database. Organization can be based on ad numbers, advertisers, publications, sections and so on. The workflow system is extremely flexible. Many tasks are automated (e.g., defining due dates and updating the status of an ad). There is no limit to the number of workflows that can be created. They can be nested and are completely user definable and modifiable. An ad doesn't have to be in a workflow to be tracked.

Workflow Manager consists of...

...used to set up the organization (users, groups, teams), the statuses (pending, late) and the ad types (comp, pickup); to specify when the status will be automatically updated; to display the status of ads, including where each item currently resides and where it came from; and to change an ad's route in the workflow. It can be used with standard reporting packages (Crystal Reports...

...reports.

* Workflow Builder is used to design templates that define the steps and routing of ads from start to finish; to set up milestone dates and status alerts; and to provide system-generated due dates and times for all steps of an ad's workflow.

* Desk presents users with the work that has been assigned to them. It ...

...edited in their native applications.

Object management. OMS provides facilities for organizing, tracking and retrieving ad elements--images, text, logos, etc. It supports any ODBC-compliant database, such as Microsoft's...

...access and viewing. When used with Workflow Manager 4, OMS provides a history of all **ad** elements.

Status and pricing. Beta testing of the Windows version is under way, with the...daily in New York.

Juliano also reported that its Blue Skii system for paginating classified **ads** from an SII system is being used successfully to produce newspaper classifieds at a site...

...project in which Management Process Integrators served as the integrator, a dump of SII classified **ads** from two city newspapers is fed to a Managing Editor ALS system. It then goes...

...publication on the Web. One of the obvious possible applications is the publishing of classified **ads**.

Internet Solutions is available immediately.

Deal for DigiCol. Linotype-Hell also announced a cooperative marketing

...

...year's? The Loki Group thinks it has found a way to make old classified **ads** a valuable resource for ongoing use. And it has developed a product with that in mind: a system for archiving and accessing published classified **ads**.

It was developed for the Portland (OR) Oregonian, which takes its published classifieds and moves...

...Server with access by Windows clients. To date the Oregonian has stored about 800,000 **ads** from 300,000 customers. The capacity currently sits at 3 GB but can be expanded...

...Some of the uses that have come into play already include these:

- * Comparisons of current **ad** sales with similar periods in the past.
- * Collecting demographic information about customers.
- * Handling calls from customers about **ads** run in the past.
- * Recalling **ads** to be published again, thus avoiding recomposing

them.

Features. The system comes with customizable fields...

...the kinds of things it provides, it converts typographic information into readable form, tracks each **ad**'s history, reports customer credit information and displays a calendar of all the days an **ad** appeared. Accounts can be looked up by customer name or **ad** number, after which there is a function to move to the next or previous **ad** from that customer.

The Oregonian paid \$50,000 for its system, which includes a 20...

...customization of fields. So far, it appears to be happy with the decision, Loki says.

Ads on the Web. Loki also featured a means of putting classified **ads** on the Web, which is being developed for **Ad**-Star Publishing Technologies and is discussed elsewhere (see p. 32).

Managing Editor offers CLS 2...

...beta version of its new Classified Layout System and a technology preview of a new **ad** tracking product called Roundhouse.

Version 2.0 of the Classified Layout System (CLS) had been...

...new product--this one being given an early preview--was Roundhouse AdsUp, Managing Editor's **ad** tracking system. It uses an NT SQL database and has Macintosh clients. It also allows...system checks jobs out and in to prevent multiple users from working on the same **ad**, and also allows "promises" to be defined for files that are known to be coming...

...user to files that are missing and creates a revision history to be used in **ad** tracking.

Access can be over a LAN or via the Internet. The Internet access allows...

...appearance at Nexpo, Miles 33 of the UK showed its AdSearch system for building searchable **ad** databases on the Internet. It was demonstrated by ATS, which will sell it in the U.S. (see p. 35).

PPI moves **ad** system to NT, SQL

Publishing Partners International (PPI) has established itself as a leading supplier of **ad** booking systems. Its client-server Advertising Management System (AMS), at its third Nexpo, is progressing like many other new **ad** systems on the market: NT, SQL, DEC Alpha, etc. Since last year, PPI's has...

...advertising. The adtaker can point to areas on the map to add zones to an **ad** being booked. Sales prompts can be created to upsell advertising to additional zones.

A second...

...function, in an early stage, uses the map facility to canvass an area to sell **ads**. With the aid of the ProfitZone product, businesses in a specific area can be selected...

...customers can develop and maintain their own pricing routines. PPI provides good facilities for booking **ads** across titles. Scheduling can be done either by entering run dates on a calendar or by inputting specific dates.

Addressing the Web. PPI also showed its WebLink product for selecting **ads**, attaching a header and outputting them in a standard format. It allows newspapers to treat...

...site in the U.S.

* Advertising--the first major showing of SCS/AdMax, combining classified **ad** entry, display **ad** entry and **ad** management since its first customer shipments in May.

* Classified pagination--the release version of SCS...supplied with the system.

Other modules. GoodNews supports other modules, including Layout-8000 for creating **ad** dummies, an electronic mail program, an HTML generator for creating pages for the Web, an...

...its earlier systems.

SCS/Track. SCS has developed a program for managing and moproduction of **ads**. It brings up, sizes and names new **ads**, using information from the booking system. It then routes **ads** from station to station as they proceed, presenting them to the appropriate users in order...

...stamps the location, date and time and updates the job status information. Logs for expired **ads** are archived to a history file.

SCS/Track supports bar codes for logging physical **ad** materials, standard report programs for printing or displaying reports based on status, identifies bottlenecks, provides...

...and analyzes costs. Among the available reports are productivity by adtaker, volume by advertiser, corrected **ads**, unfinished **ads**, etc.

The system displays lists of **ads** with or without insertion orders.

SCS/Track runs on any PC, including remote units in...

...AdMax. Like a number of other companies these days, SCS has combined classified and display **ad** entry within one program, although it uses different entry forms. Unlike some others, though, SCS...

...handles pricing of multiple products; automatic addition of extra charges for color, logos, etc.; and **ad** placement requests for page

dummying.

For management, it accommodates different deadlines for different days. It documents who made changes and when they were made. It faxes **ads** back to customers for approval, including logos, pricing and the run schedule in the fax. It also tracks income from the moment an **ad** is entered and keeps detailed audit-trail information for all transactions.

Status. AdMax went through...At the Globe, it is being used to track EdPage, Architect, Full-Page Output, Display **Ad** Services and Classified Pagination.

It uses colors to note status or content type, depending on...easy through the internal database structure.

The system also builds links to articles, images and **printed pages** stored as PDF files. This allows data in the Web page format to be viewed ...permit Unisys to compete newspapers moving to NT primarily out of preference.

Electronic Delivery of **Ads** for Print

ALTHOUGH NOT THE hottest topic at the show, digital distribution of advertising for...

...split off in January.

Note that the other active area for the electronic transmission of **ads** --offering classified **ads** on the Internet--appears later.

Ad -Star supports Windows client, fax

Ad -Star Publishing Technologies, which has been supplying systems for transmitting display and classified **ads** for about as long as anybody, says its installed systems now transmit more than one million **ads** annually, from more than 1,500 advertiser sites to 62 participating newspapers. It offers two products: **Ad** -Star Telecommunications Processor, which runs on a PC at the newspaper site, and **Ad** -Star Remote, which has been running on Macintoshes and MS-DOS PCs at advertiser and **ad** agency locations.

New at Nexpo were support for Windows among remote clients, true H&J running in the client, enhanced **ad** management at the advertiser's site and the ability to accommodate **ads** sent by fax.

Windows clients and H&J. The Windows clients operating at advertisers' sites...

...publication, which includes an H&J program modeled after the one the paper actually uses.

Ad -Star says it can achieve results that are extremely close to what is obtained on each newspaper's system, regardless of what software the newspaper is running. For example, **Ad** -Star Remote uses the actual kerning tables of the host system; it can be programmed...

...is the hyphenation dictionary, which tends to change frequently as new words are added. So **Ad** -Star sets up its remote clients to transmit hard line endings so that any slight...

...the text has been entered.

Prior to offering this H&J software in the client, **Ad** -Star provided an H&J station at the newspaper. **Ad** copy was sent to the H&J station and the results were returned to the...

...which was unnecessarily time consuming and cumbersome.

It is possible to embed codes in the **ad** file that call for the insertion of logos, generate typographic formats, etc. The **ad** agency can use the same code system for all newspapers because the **Ad** -Star program converts them appropriately for each target system.

Fax handling. A new optional program for the client station, called the Fax Management System, receives **ads** by fax, automatically runs them through an OCR program, and displays the **ad** in two forms side by side: the image of the **ad** and the OCR version. After running some tests, **Ad** -Star has settled on Xerox's TextBridge OCR software for this use.

Editorial functionality supported...

...cutting and pasting text blocks, searching and replacing character strings, spelling checking and rotation of **ads** in 90(degrees) increments.

The program also includes features for automatic processing of faxed **ads**, such as retrieving demographic information about the customer, verifying whether the **ad** can be filed automatically on the host system and faxing back an acknowledgment.

Pricing. System...

...the second year on range from \$625 per month to \$1,375 per month.

Customers. **Ad -Star** has built an impressive list of participating newspapers. Its list of 52 in the...than 300 direct advertisers. Many of each type operate at multiple sites.

Classifieds on Web. **Ad -Star** also demonstrated a prototype of a program for putting classified **ads** on the Web (see coverage on p. 32).

Ad -Star Publishing Technologies, 250 West 57th St., Suite 932, New York, NY 10107; phone (212...

...founded by former Camex executive George White and colleagues. Its **AdDirect** system aids in transmitting **ads** in various formats (PDF, TIFF/IT, etc.) from an advertiser to a newspaper.

New at...

...installation of **AdDirect**, on why using PDF is a more efficient means of electronically delivering **ads** and on what menu selections in **Xpress** and **PageMaker** are required to generate a PDF...

...the **Nexpo** show, **ImageNet** introduced another option for attaching an EDI job ticket to display **ads** for electronic transmission.

ImageNet's EDI software was developed following specifications of the Newspaper Association...

...file.

- * **Proof It** EDI, an Acrobat plug-in for generating a printed proof of an **ad** with job-ticket information on a single page.

- * **Find It**, an Acrobat plug-in for...

...Mercury. This software module allows you to attach an EDI job ticket to a display **ad** and send it to a designated publisher. It was designed to minimize the amount of...

...numbers and run dates, stored in the business computer database. Mercury reads in the original **ad** and generates a new file with an EDI job ticket. The combined file is then sent as an E-mail attachment.

Constable Acquire. **Acquire** receives the incoming digital **ad**, extracts the **ad** from the production instructions and places the **ad** in a designated folder. It can be set up to print the job ticket automatically upon receipt of an **ad**. **Acquire** also notifies the **ad** service and production units of the arrival of new **ads**.

Acquire updates the database with incoming **ad** information and can upload EDI information to the business database if supported. It also embeds...

...on the type, into specified folders.

AutoMover unwraps incoming mail messages and notes the attached **ads** in a designated folder. Job tickets with **ads** are treated differently from messages without attached **ads**. **AutoMover** also notifies users that incoming digital **ads** are ready for processing.

Acrobat plug-ins. **ImageNet** has developed a series of plug-ins...full EDI information at the top of the page and a small version of the **ad** at the bottom of the page. This can then be output for proofing or filing...

...Internet, **ImageNet** is thinking about using **Netscape** to transmit

job-ticket information for use where **ads** may have been delivered to the newspaper via regular mail. The reception system could theoretically...

...that had been sent in from the advertiser to help with tracking and placement of **ads**.

Hardware requirements. The software initially will be available for the Mac. Plans for developing versions...

...phone (908) 766-1200. E-mail: sales@cornelldata.com

Luminous AVN adds job ticket for **ads**

At its first newspaper show since being spun off from Adobe, Luminous focused on newspaper applications. Its Adobe Virtual Network version 1.1 now provides an electronic job ticket for **ad** submission.

Luminous also announced plans to have by Seybold San Francisco an NT version of...

...fax (206) 689-6701.

Mission Critical turns to Net

Mission Critical's system for delivering **ads** electronically has a few new twists.

AdFast/Images is a new version of **ad** entry software that allows advertisers to transmit black-and-white images along with their **ads**. When an order is received by the AdCommand server, the **ad** and the graphic are separated and forwarded to the appropriate departments, i.e., the **ad** is sent to the advertising system and the graphic is sent to the production operation...

...com extends the PC system to any platform by using the Internet-based applications for **ad** entry. Using a forms-capable Web browser, an advertiser can fill in a job ticket online via pulldown menus. Images can be attached to **ads**.

Using CGI scripts, an **ad** enters the AdFast Web server and is forwarded to the AdCommand server. The system then sends the advertiser a note via the Web browser, indicating that the **ad** was received successfully or that there were errors. The **ad** tracking number is included. After the front-end advertising system processes the **ad**, AdInterface software sends the advertiser updated status information, including the final **ad** text, the **ad** depth in number of lines, the price and the **ad** number. This information is available via E-mail or fax. AdInterface software, which is integrated with two-way software on the classified system, can also send **ads** to a common directory or to assigned sales reps.

AdFast.com also comes with other...

...reports directly for access using the Web browser.

Mission Critical also plans to support display **ads** with its current AdFast and AdFast.com systems.

The AdFast.com server requires a 100...

...1995.

The system will allow real-estate agents to create, schedule and transmit real-estate **ads**, complete with property pictures, directly to newspapers. At the newspaper the **ads** will be routed automatically, priced and formatted for production. The new system also will provide realtors with **ad** management capabilities, including detailed records on the status of each **ad** placed with the newspaper.

The system will be shown first this summer prior to a...

...DOUBT one of the hottest new fields in the industry is online publishing of classified **ads**. New vendors and old ones are scurrying to get into the act. Some newspapers are...activity will achieve will depend on how certain factors play out.

Positive factors

Delivering classified **ads** online has key advantages over **ads** in

print that could be influential in making this form successful in the market.

Cost...

...with the cost of publishing in print. If the newspaper already has the database of **ads**, it costs comparatively little to make them available online, at least in the context of...

...printed newspaper.

Search facilities. Anyone who has ever pored over pages and pages of classified **ads** wondering where else to look for a desired item would be delighted to have search facilities that sort through the database and select all (and only) the relevant **ads** to present to the reader. Online **ad** services can offer sophisticated search capabilities that provide more accurate results.

Agents. Besides the convenience...

...criteria has entered the database. (A spouse or colleague might perform the same function with **printed ads**, but that practice could get tiresome quickly.)

Larger database. It would be impossible for a local newspaper to print classified **ads** for an area extending across a big state or the country. But online **ads** can easily reach far beyond those bounds to present readers with information relating to nearly...

...location. In some cases, such as searching for a house in a faraway place, online **ads** can do something that would be nearly impossible to do with printed ones.

Links to associated information. Although print advertising offers the option of adding display **ads** to present a more powerful force than simple liner **ads**, the reader may not see the display **ads**. They may appear on a different page or may be separated by many other **ads**. With online advertising, it is possible to have a link to a display **ad** --or multiple **ads** and nearly unlimited volumes of different types of information--immediately from the **ad** the reader is viewing. This makes an attractive addition for the advertiser.

Negative factors

Those...

...online classifieds can provide a useful service either instead of or in addition to its **printed ads**. But they ignore a few other issues that might tell us much about how online...

...to be large enough to make it worth an advertiser's while to pay for **ads** --which is OK because, so far, most online classifieds are offered free to advertisers that pay for a **print ad**.

Other competition. The printed paper isn't the only alternative to online **ads**. Newspapers face other entrepreneurial operations selling space online, especially in the real-estate and automotive...

...with the likes of CNN and TV news programs. However, they have an established classified **ad** sales program and a proven base of readers. The winning cards for this game may...

...its customers. AdOne offers a turnkey service to take a newspaper's classifieds online.

Online **ads** cost \$5-\$9 beyond the regular print price, with little print classified erosion, according to the company.

In addition to technical resources, AdOne offers sales training to classified **ad** salespeople and a marketing plan for promoting the online classified advertising capability.

Ad -Star, Loki put ads on Web

Ad -Star Publishing Technologies demonstrated a prototype of a product for putting classified **ads** on the Web. Developed for **Ad -Star**

by the Loki Group, it takes **ads** in a variety of formats, such as ASCII or Autologic's ICL, parses them to...

...selects the classification and is prompted about refining the search. For example, for real-estate **ads**, options appear for specifying the number of bedrooms, baths and so on.
Hits will be...

...select one or more from the entire list and request the full text of the **ad**.

Part of the plan is to sell links from **ads** back to the advertiser's home page. Also planned for the future is the ability to handle display **ads**. It will parse them to produce searchable text.

Ad-Star is using the working prototype to find a few initial customers. It says the program will interface to most front-end classified systems.

ClassiFacts gathers **ads** from 50 papers

ClassiFacts gathers Sunday classified and display **ads** for employment, real estate and automobiles from 50 newspapers. **Ads** not available in electronic form are scanned. Royalties are paid to the contributing newspapers while...

...result of this established business, ClassiFacts is in an ideal position to offer its newspaper **ad** contributing clients HTML conversion services and hosting services for going online to a wider audience...

...Sybase database.

* The Edgil Access Processor (EAP) provides application programs with access to the classified **ad** information in the WebOptimize database. Query and result information is transferred between application programs to ...

...the Internet using AdParse. At the site, users are able to search and respond to **ads** online. The system allows the user to create a resume for each type of job...

...supports blind resumes to protect personal information. The resume is then associated with the specific **ad** the user is responding to.

Companies will be able to view online resumes and place **ads** online. They can choose to receive responses via E-mail or fax.

Before **ads** that have been entered online become available for searching, Herald employees intercept the **ads** to review and proof them using the Web browser. Employees can also view information about...

...involves putting content on the Net, is covered elsewhere. Electric Classifieds, which involves putting class **ads** online, is covered here.

Electric Classifieds, Inc. (ECI), is building on the success of its...

...stored.

ECI supplies a series of templates for each function offered-- for browsing, searching, placing **ads** and using virtual agents. Newspapers can customize the look and feel of the display and...develop and exploit new sources and innovative ways to generate advertising and transaction revenues.

Placing **ads**. ECI's system allows advertisers to place **ads** using an online form. Advertisers can attach multimedia elements and preview their online **ads**. After **ads** are submitted, the server forwards the information to the front-end system and generates an HTML page with the cost of the **ad**.

For automobile **ads**, ECI has added a feature that lets online advertisers review the blue-book prices for...

...keywords or fielded data. ECI's system tracks each user's sessions and

generates banner **ads** based on an individual's profile. This provides direct targeting of **ads** to a more accurate selection of potential customers.

For its Match.com service, ECI plans to add higher levels of interactivity including individual and group chat rooms, audio support with **ads** and possibly avatars.

Electric Classifieds, 340 Brannan St., Suite 203, San Francisco, CA 94107; phone...

...added resources to obtain automobile information.

The system also allows newspapers to rotate among banner **ads** each time a user accesses the Search and New Cars pages.

Classifieds Online. Classifieds Online allows newspapers to upload their classified liner **ads** from front-end systems to the Web. A custom data filter parses the data into main and subclassification headings for easier searching. Newspapers can optionally enable advertisers to insert new **ads** into the database. Online commerce capabilities can be added to accept payments for **ads**.

Personal Press. Personal Press, expected this fall, allows users to select subjects of interest from...

...GuideLines product (see p. 41), Management Process Integrators (MPI) unveiled a prototype service for automobile **ads**. Here users place **ads** online and input credit-card information to pay for them. MPI says its system could also be used for general **ad** entry for both print and Web **ads**. **Ads** could be tied into the pagination system of the paper to H&J the **ad** and supply pricing via the Web browser.

MPI has an alliance with Illustra Information Technologies...on the fly, based on the results of a database query.

The system supports online **ad** entry, allowing users to enter data via a form and have the information updated in...

...to information regarding the current resale price of a car before the user placed an **ad**. Similarly, users could view how others may have priced the same car. Optionally, users could...

...generate an online proof for the print and Web versions so users can see their **ads** and approve them before submitting final **ad** requests.

MPI has formed strategic alliances with Illustra, Oracle, New Media Alliance, Managing Editor, Optronics...

...InterStep and MicroVoice now offer a method of making all of a newspaper's classified **ads** searchable and accessible by the Web, E-mail and audiotext.

* InterStep's hybrid relational, full...

...users select icons representing their interests from a library of images. Icons are displayed with **ads** to make them more graphically appealing and to highlight a particular interest, such as biking...

...be able to add information that is not found in the printed version of the **ad** and to add links to their own home pages. In both products--the ones for general classified **ads** and personals--an online **ad** placement will first go into the paper's internal classified database or a processing center so it can be reviewed. Then the **ad** is put in the newspaper's column and in the Web, E-mail and audiotext systems.

For both the personals and classifieds, users can browse through all **ads** or search for items based on specific criteria. Before conducting a search, the system automatically displays the current total number of **ads** in each category next to each category name--unusual for online databases. This allows the user to avoid searching in categories that contain no **ads**.

For general classifieds, MicroVoice can create a map divided into regions to enable a more graphical approach to searching. For personals, users can search for **ads** locally or nationally. The **ad** count for each

day is displayed automatically. Newspapers can opt not to provide access to national **ads** .

Advertisers can place **ads** while online.

InterStep's system includes Etrieve, its virtual-agent technology, which can forward updated...

...a secure server to allow newspapers to charge for certain functions.

Users can respond to **ads** by replying to a blind E-mail address to ...also be set up to allow users to call a 900 number to respond to **ads** .

Another handy feature of both systems is the ability to save searches. Saved **ads** remain available each time the user logs on.

For display **ads** , online advertisers can input HTML tags to enliven their **ads** . The system also allows advertisers to view the number of times their **ad** was displayed. Statistics and demographic information is also available to advertisers.

For its personals product...

...developed a system called AdSearch that extracts advertising from existing databases and automatically builds searchable **ad** databases on the Internet. It uses Verity's Topic search engine and Netscape's Navigator ...

...the U.S. sales rights.

The system can be used with both display and classified **ads** . For handling display **ads** , Miles has developed a Quark Xtension called Power Collector that breaks a display **ad** down into multiple individual items that are linked back to the main **ad** . These individual items can then be treated in certain ways during a search operation.

AdSearch provides a means of automatically building a sophisticated searchable **ad** database without any extra work at the time the **ads** are booked. After the database has been built, it can be searched from the Internet...

...Verity engine and a list of hits is then shown. In the case of display **ads** that are broken into smaller items, any hit that is part of a larger display **ad** is shown with a link. Clicking on the link brings up the full display **ad** through Adobe Amber as a PDF file.

It is possible also to link a display **ad** to another area on the Web where the advertiser could place another **ad** at extra cost.

One UK customer is using AdSearch with car **ads** selected from three different newspapers. Through a Topic capability, the customer matches a variety of...

...others.

WebLink, which works with virtually any front-end system, takes a stored database of **ads** and pulls it into a database on the Web server. The system employs Boolean searching...

...of hits (500 to 1,000).

In its current implementation (www.philanet.com), all classified **ads** are combined into a single database. When a user performs a search (depending on the search criteria chosen), the results may include a variety of **ads** from different categories. For example, when we were looking for houses for sale, we used "for sale" in our search argument and retrieved not only real-estate **ads** but also car **ads** , since the database included cars with the "for" and "sale" descriptions. Scrolling through lists of **ads** that are unrelated to what is really wanted could be frustrating.

Montgomery Publishing Internet Division...

...the development of the product, is currently working on improvements, including the ability to submit **ads** online and the provision of online billing.

For status reports and tracking information for banner **ads** , unlike

many of its competitors, MPID doesn't use a flashy Netscape interface, which allows...

...19034; phone (215) 542-0200, fax (215) 643-0166. Internet:
www.philanet.com

Quest hosts **ad** database

Quest Network, a newcomer to Nexpo, has its own system for posting classified information...

...on an NT server. The database supports both field and free-text searches.

No online **ad** entry is supported, but Quest can supply a link to information regarding the newspaper's **ad** submission procedures and rates.

Like Zip2, ECI and MPI, Quest has hooked its database to...classified information.

Newspapers using the service simply add a link to Quest's home page. **Ads** retrieved from the system include links back to the newspaper that supplied the **ad**. So, if you entered the system via the Milwaukee Journal, you could end up in Wisconsin if you click on an **ad** supplied from a newspaper in that area.

Ads are displayed in either frame- or table-based versions, depending on the browser used. (We...

...divided into subcategories (180 in all).

Like the MicroVoice system, Quest shows the number of **ads** in each category before a search is performed; however, it doesn't provide this breakdown...

...to the user.

More than 100 newspapers currently use the system. Quest charges \$.50 per **ad** per week, which includes the 800 service and operators. Images cost \$.50 extra per week. The database currently holds more than 34,000 **ads** from 37 states. Information is updated twice a day, at 2 a.m. and 4... American Color has also signed an agreement with Management Process Integrators to resell its online **ad** system (see MPI below for more details).

E&P sets up 'definitive source'
Editor and...

...the streams of incoming data from Internet newsgroups and listservs. The system also supports an **ad** placement scheme that displays banner **ads** based on certain search terms or categories.

Members can access E&P's archives back...

...a forum for online discussions. At its site, E&P also provides information about placing **ads** in its print version, demographics and a mission statement. The site's sponsors include AccuWeather...

...Xpress pages to FutureTense Texture format.

HexMac has also added a direct connection to the **Ad** Layout System from Managing Editor, its U.S. distributor. Now newspapers using this system can easily publish their classified **ads** to the Net. Other new features include handling multiple domains in one database, automatic uploading...newspapers to target advertising based on group information. Newspapers can also tie in their classified **ads** to community information. For example, real-estate **ads** could have links to information about schools in the area.

Shopping and Business Life. KOZ...

...ranking for text-related documents. A DBII database is used for searching and storing classified **ad** information. IBM is using its own online classified system but can integrate ECI's system (see Internet Classifieds coverage) if the newspaper wishes. Like the ECI system,

advertisers can place **ads** via an online form. IBM's system also allows newspapers to control the display of banner **ads** by defining the number of **ads** per page and whether the **ads** are static or based on a user's activity.

Information is displayed in a frame...he expected, IBM will issue a refund for those items. InfoMarket uses IBM's own **billing system**, which IBM plans to sell as a stand-alone product.

The IBM InfoMarket service is...

...editorial or classified system. Using RealMedia's Open AdStream product, newspapers can insert targeted banner **ads** based on a user's activity in the system. Open AdStream is based on Real Media's core technology called AdStream, an Internet **ad** planning and placement system that enables advertisers to insert **ads** on MediaExpress, a network of newspaper Web sites.

Pantheon provides pathway to Internet

Pantheon, a...stories to a customizable template for a unique look and feel.

* Place photos, graphics and **ads** on pages. **Ads** can be dragged and dropped, or a URL **ad** link to an advertiser's home page can be input. It is even possible to...Voyager. It will be possible to archive not only elements from editorial systems but also **ads** and graphics. Stauffer's system exports files directly from Xpress, linking text and images automatically...

... gets on PostScript bandwagon

With the world going digital and clients building more of their **ads** on standard platforms (with output intended for PostScript typesetters), AdSat has been forced to upgrade and enhance its methods of distributing **ads** .

Its latest development is digital input of **ads** , which is running

live in Akron, Ohio. Customers are beginning to supply **ads** to AdSat as PostScript files, which are output directly to Akron. Others will follow. **Ads** provided as veloxes can be supplied to newspaper clients in TIFF.

The use of PostScript as a standard format for moving **ads** to and from clients is clearly beginning. About 10% of **advertisements** coming into AdSat are in PostScript format. The use of PostScript for output, however, is...

...making this the dominant approach elsewhere.

On the international front, AdSat is moving U.S. **ads** into UK publications. This is primarily true for financial **ads**, but it is hoped that the concept will be broadened and the number of **ads** increased.

Apple features Radius Rocket

As has become customary at ANPA shows, the Apple booth...

...system configuration that extended into a range of newspaper departments including page layout and management, **ad** makeup, newsrooms and editorial as well as other production operations. A variety of Mac platforms...
